

You're in control with Colocation Services

Explore next-gen cloud opportunities with the best network infrastructure behind you

If you're looking for the benefits of an off-site datacentre but need a high level of control, our Colocation Services are for you. Thanks to our comprehensive estate of secure exchange buildings, you can have your IT and communications equipment in a convenient location without needing your own datacentre premises. Our resilient, high-performance infrastructure will also help you explore opportunities in low-latency edge computing.

The complete datacentre solution

Whether you need single racks, high-density servers or a full datacentre, we can help. We have thousands of exchanges across the UK, and more than 100 premium locations with low-latency core access.

While your datacentre may be in our exchange, you're still in charge. It's up to you how it's designed, and you can access your equipment any time you want.

Cutting-edge infrastructure

The rise of 5G and edge computing is creating exciting new opportunities for low-latency applications. Be ready for the next generation of data-processing and cloud-based services with Colocation Services, giving you local fibre connectivity to our core networks and EE – the UK's best network for 11 years in a row.

A safe space for your data

We defend your business data around the clock. As well as carrier-grade networking, we offer robust cyber security measures, including Quantum Key Distribution (QKD).

Physical security is covered too. As well as monitored electronic entry systems, we give you the option of standard or electronic locks on racks.

Reliability as standard

Colocation Services is perfect for disaster recovery too, thanks to our outstanding network resilience. With us, you're connecting through one of the most reliable networks in the UK.

We also offer a variety of physical protections, including on-site generators and fire safety systems – all designed to keep your business going, no matter what happens.

Complementary services

You can access a menu of additional services within our datacentres, including:

- Help with equipment patching and out-of-hours replacements.
- Datacentre migration services to support your move into a Colocation Services exchange.
- Cross-connect capabilities to cloud providers, including Microsoft Azure and Amazon AWS.
- Managed decommissioning of old equipment, in line with data and environmental regulations.

Why BT Wholesale?

- We provide advanced, robust and resilient connectivity across the UK from urban centres to remote rural locations.
- Our existing facilities offer easy and immediate access to the right number of racks for every business – with room to grow.

- We're trusted by key government services, supporting the nation's critical infrastructure.
- We've invested almost half a billion pounds across our wide telephone exchange estate, creating state-of-the-art edge facilities throughout the UK.
- Through our partnerships with hyperscalers like Amazon Web Services, datacentre providers and enterprises, we can develop bespoke facilities from existing exchange buildings.
- Our strong relationships with power network operators mean we can offer two or four megawatts, depending on your chosen location.
- Throughout our premises, we use 100% renewable electricity, helping you achieve your sustainability goals.
- As an established provider, we have the expertise and experience to support even the most ambitious projects.
- We have more than 3,500 cybersecurity experts, protecting our network and keeping your data safe.
